

# The Cost Estimator Tool

Helping members understand their health care costs

We understand that not knowing the cost of care can cause stress for members. That's why we created a more transparent, personalized and empowering pricing tool. Members can use it in the moment and as a proactive resource to help estimate and manage health care costs.

## Here's how it works:

**1.** Members enter their visit or procedure type or choose it from the list of services. They can also search by a specific provider or find a provider offering a service within their area.

**2.** The Cost Estimator Tool will estimate what they'll pay based on their health plan, including whether their deductible has been met for the year.

With the Cost Estimator Tool, members can get personalized cost information quickly — and feel confident before their appointment. It empowers users to choose care that may be at or below average cost.
