

Listen Up

Your ears could be telling you something

Do you often find yourself asking others to repeat themselves? Is there a constant ringing in your ears? If so, your ears could be trying to tell you something.

What causes hearing loss?

Hearing loss is caused by temporary obstructions in the outer or middle ear or permanent damage to the tiny hairs in the inner ear. Common causes of damage include exposure to noise, aging, other health conditions, and certain medications.

When should I get my hearing checked?

Hearing loss can come gradually. You may not even notice it's happening. If your hearing test reports your hearing is okay, stick to once every three to five years. You should test your hearing more often if you are 55 or older or are experiencing any of the following:

- **Consistent exposure** to loud noises
- **Ringing** in your ears
- **Difficulty understanding** in noisy environments or in groups
- **Hearing mumbling** or feeling as though people are not speaking clearly

1 in 9

Americans have hearing loss. By 2030, that number is expected to double.¹

Delta Dental of Iowa now offers hearing discount benefits.
