

Preventive Medicine List

In addition to a healthy lifestyle, preventive medications can help people avoid many illnesses and conditions. The prescription portion of the Key Medical Plan includes select preventive medications that can help support you and your family's goal of ongoing good health. In order for these medications to be covered as preventive drugs under the Plan, however, you must obtain your medications through the Plan's prescription drug program that is administered by Express Scripts.

This list contains examples of your plan's preventive medications that meet the interpretation of the U.S. Department of Treasury's clinical guidance and includes therapeutic categories. The medications are categorized based on the medical conditions that they are used to prevent. This is not an all-inclusive list; only examples of medicines in each category are listed. Coverage prior to the deductible being met may not be provided for every dosage form of a listed medication. Please contact Member Services at 800.849.9138 if you have questions. This list is periodically reviewed by clinical experts. Medications may be added to or removed from the list based on different factors, including the intended purpose of the medication and its availability.

In certain situations, medications marked with (†) on this list are not covered unless you first receive approval through a coverage review (prior authorization). This review uses plan rules based on FDA-approved prescribing and safety information, clinical guidelines, and uses that are considered reasonable, safe, and effective. There are other medications that may be covered, but with limits (for example, only for a certain amount or for certain uses), unless you receive approval through a coverage review. During this review, Express Scripts asks your doctor for more information than what is on the prescription before the medication may be covered under your plan. If you fill or refill a prescription for one of these medications and do not first obtain your plan's approval, you will have to pay the full cost of the medication instead of just a coinsurance.

This list includes medications always used for prevention and sometimes for treatment.

Coverage prior to the deductible being met may not be provided for every dosage form of a listed medicine.

Please note: When feasible, brand names are shown in capitals in each category. If generic is available, it is listed in lowercase next to the brand name. If only generics are available (for example, brands are no longer available), they will only be listed in lowercase.
