WHAT IS REGENEXX?

Regenexx is an innovative treatment for orthopedic injuries that enhances your body's natural healing processes. To treat damaged tendons, ligaments, muscle, bone, and cartilage, the physicians draw your blood platelets and bone marrow aspirate and process them using **Regenexx** lab processing techniques. They then inject them precisely at the site of your injury using image guidance. **Regenexx** treatments provide a lower-risk, lower-cost, minimally invasive alternative for up to 70 percent of elective orthopedic surgeries.

THE REGENEXX DIFFERENCE

Regenexx is a nonsurgical outpatient therapy performed either in a single day or in a series of three treatments over two weeks. Most patients are encouraged to return to activity within a week of their procedure. Patients with health factors such as heart issues or risk of stroke can find a lower risk alternative to surgery with **Regenexx** treatments.
