

# Cancer Care Solutions

## Continuous support throughout your employees' health journey

Facing cancer can be an overwhelming experience — and no one should have to do it alone. Our Cancer Care Solutions program is here to connect your employees and their loved ones affected by cancer to specialized resources that offer guidance at every stage of their cancer care journey.

## Our approach

Anthem's dedicated team understands the complexity of cancer care and can personalize its support for each individual and situation — for the right care, at the right time, in the right setting. We achieve this by:

**Partnering with oncologists** to improve patient care coordination and outcomes.

**Prioritizing patients' emotional and physical health** during care and beyond.

**Increasing patient access to excellent care** for a better quality of life and lower costs.

## The challenges

About

# 1.7 million

Americans are diagnosed with cancer each year.<sup>1</sup>

Cancer treatment alone accounts for

# 12%

of U.S. employers' total medical costs.<sup>2</sup>

# \$139 billion

is lost annually due to diminished productivity and missed work.<sup>2</sup>

Together, we can meet these challenges by reimagining what's possible for every moment of cancer care and delivering tangible results.

**Meaningful connections help your employees feel protected, confident, and empowered**

- **Cancer Care Navigators** and **Case Management nurses** help patients understand their diagnosis and treatment. Then, they work with patients throughout their care journey to coordinate care using a holistic approach, including physical and behavioral health, as well as local and national community resources.

**Collaborative expertise drives support at every stage of care**

- We **share treatment pathways and best practices** with oncologists and care teams to improve care planning.
- Providers are **rewarded with value-based care reimbursement** for quality care based on nationally accepted practices.

**Technology, analytics, and integration transform care and impact outcomes**

- Our advanced predictive models can proactively **identify those who may need extra support** during cancer treatment, triggering outreach and action plans.
- Giving oncologists and care teams access to our extensive data helps them **focus on high-risk patients** and prevent avoidable hospitalizations.

## Your trusted partner in cancer care

We are committed to helping your employees and their family members who have cancer receive the resources and guidance they need, so they can go from living with cancer to living life to the fullest.

Please contact your Anthem Sales or account representative to learn more about Cancer Care Solutions. We can also provide your employees with digital cancer support tools through our Stronger Together website, **[communityresources.anthem.com](https://communityresources.anthem.com)**.
