A SOLUTION TO AVOID UNNECESSARY SURGERY

The Regenexx Corporate Program is a powerful tool that adds Regenexx Interventional Orthopedics as an additional step in care to better manage the pathway of an orthopedic event so that surgery is only used when medically necessary.

Regenexx® | **IS AN ADDED HEALTHCARE BENEFIT** with no cost to add to your health plan

WHAT IS INTERVENTIONAL ORTHOPEDICS?

Interventional Orthopedics is a medical specialty that uses precise image-guided injections of orthobiologics, such as stem cells and platelet-rich plasma (PRP). These orthobiologics are prepared from the patient's own concentrated cells and are then reinjected directly into the injured area, replacing the need for invasive and costly surgery. Interventional Orthopedics is:

- Less invasive, needle-based
- Using orthobiologics to facilitate your body's repair of bone, tendon, cartilage, ligament, and muscle
- Precise image-guided placement
- Less risk, less downtime, little to no prescription medication

Why You Desperately Need an Orthopedic Surgery Gatekeeper

INTERVENING ON THE PATHWAY IS A WIN-WIN

In approximately 70% of cases, advanced and precise image-guided injections of orthobiologics (the patient's own stem cells, platelet-rich plasma, etc.) can address the orthopedic problem without surgery. This means that 70% of patients who would otherwise have invasive orthopedic surgeries in a hospital system or ambulatory surgery center are treated as an outpatient in a physician's clinic*. Adding this step in your orthopedic treatment plan offers dramatic cost-savings while also safeguarding your employees from surgeries that are not medically necessary.

One of the primary benefits of self-funding a health plan is flexibility. Self-funded plans are not constrained in the same ways as fully insured plans, which allows employers to exercise more control over the benefit options and pricing they offer employees. Employers have the freedom, and arguably the responsibility, to tailor a health benefit plan and Summary Plan Description (SPD) to accommodate the best interests of their employees. Regenexx has assisted many employers in changing their SPD and working with brokers and TPAs to incorporate the Regenexx procedures into employers' health plans.

EMPLOYEE PERSPECTIVES...

This is something that I never dreamed would be available to me. I am so grateful that this has been added to our benefits. I get a full night's sleep now and am able to get back to my workout routine. It was a one-day recovery with a weekend to take it slow.
- Joe M., **Manager**

I have gone through three traditional surgeries, and the amount of recovery time is outrageous. With Regenexx I was able to use my legs right away, and after six weeks I felt really good. With regular surgery I would have been laid up for at least six weeks before even starting therapy.
- Janet K., **Accountant**

If not for my benefits covering the Regenexx procedure, I would have been looking at a knee replacement. This is a much better option for me and has had a huge impact for the better for me and my employer.
- Dan B.- **Welder**

* This applies only to elective orthopedic surgery without fracture-related care and acute trauma.
